# An Overview of Blood Groups

There are four main blood groups (types of blood) – A, B, AB and O. Your blood group is determined by the genes you inherit from your parents. Each group can be either RhD positive or RhD negative, which means in total there are eight main blood groups.

## Antibodies and antigens

Blood is made up of red blood cells, white blood cells and platelets in a liquid called plasma. Your blood group is identified by antibodies and antigens in the blood.

Antibodies are proteins found in plasma. They're part of your body's natural defences. They recognise foreign substances, such as germs, and alert your immune system, which destroys them.

Antigens are protein molecules found on the surface of red blood cells.

## The ABO system

There are four main blood groups defined by the ABO system:

**Blood Group A** – has A antigens on the red blood cells with anti-B antibodies in the plasma

**Blood Group B** – has B antigens with anti-A antibodies in the plasma

**Blood Group O** – has no antigens, but both anti-A and anti-B antibodies in the plasma

**Blood Group AB** – has both A and B antigens, but no antibodies

Blood group O is the most common blood group.

Receiving blood from the wrong ABO group can be life threatening. For example, if someone with group B blood is given group A blood, their anti-A antibodies will attack the group A cells.

This is why group A blood must never be given to someone who has group B blood and vice versa.

As group O red blood cells don't have any A or B antigens, it can safely be given to any other group.

For requirement of any Blood-Group, Please Contact:
